

AHEM

PACKAGING

AHEM AMBALAJ SAN. VE TIC.LTD.STI

Our company is one of the leading plastic packaging companies in Turkey, provides sales and marketing services. We initially served only in Turkey, today our company exports to Netherlands, Algeria, Syria, Iraq, Iran, Georgia, Armenia, Azerbaijan and Saudi Arabia, where we are proud to send Turkish products around the globe. Our company started its business in the packaging industry in 1989 by making Paper Packaging. When it comes to plastic packaging sector, it ranks first among the companies that come to mind. Quality, fast, disciplined, hygienic work with the understanding of the end-consumer and gives confidence to the consumer. The sectors we serve include Food, Health, Construction, Cleaning Products, Textile, etc. where we are engaged in the production and marketing of plastic packaging suitable for many sectors.

Dry Fruits

DOYPACK

Nowadays, in flexible packaging sector these types of bags are the most common for sale and production purposes. These are stylish, practical and easy to use. Thanks to the zipper feature, when package is opened, it ensures that the mouth is closed and kept fresh. These packagings are also known as standing packages. Doypacks are one of the most preferred packages due to their durability and styles. Zippers, different types of printings, different sizes of windows and valves can be applied and made for these types of packs. In addition partial lacquer, oval corner, and hanger hole applications can be made. This type of packaging is widely used for sectors of dry food, confectionery, tea, coffee, spices, pet food and nuts.

SIDE GUSSET

Side gusset packaging is a robust packaging product. It protects the inside product by means of front lock or top lock and provides easy stacking. It can be printed from the side gussets and all of the other sides. It can be stacked on the shelves without hanging and has ability to stand upright. Enables filling without waste. It is economical due to its light weight and large internal volume. Also reduces logistic costs. It can be used in areas such as dry food, nuts, coffee, tea, spices, bird food, fish food and confectionery.

SIDE WELDED

It is the most widely used packaging type in both horizontal and vertical packaging systems. It is the most accurate method in terms of robustness. It can be produced with or without gussets.

Back welded packagings are usually used for 250gr or more components coffee packages. It is designed to preserve the flavor and aroma of the inside product. It has the same appearance as 4 side welded packagings except there is a weld on the back of the pack.

TECHNICAL INFORMATION

PRINT OPTIONS

Rotogravure: It is one of the most basic printing techniques. This printing technique is also known as Intaglio Printing. The molds used in the rotogravure printing system are not high or embossed, on the contrary, they are hollow. In rotogravure printing, every copy is exactly the same. It is a printing technique where the most demanding designs can be easily printed.

Flexo: It is the most widely used type of printing. Thanks to its flexible photopolymer printing plates, it prints directly on the substrate. It prints on the plastic film in the form of a coil in a series and in a short time.

Material Groups Generally Used in Dry Fruits Packaging

- OPP
- OPP-CPP
- PET-PE
- PET-PETMET-PE
- PET-ALÜ-PE
- PAPE
